Equity Target

Adventurous

100%

The MKC Invest Tracking Tomorrow portfolio 10 aims to provide very long-term capital growth from a diversified portfolio of collective investments. The portfolio will be managed such that its overall level of investment risk will be suitable for, and in line with the expectations of, an investor at level 10 on the MKC "Baseline" scale of investment risk. The portfolio aims to outperform (net of any investment related costs but not necessarily net of any costs relating to advice or custody) this strategic asset allocation over the course of at least two full market cycles through the adoption of a long-term tactical asset allocation derived from credible research and projections about future global stock market capitalisations. The underlying collective investments will be index tracking funds except in exceptional circumstances where suitable index tracking funds cannot be purchased. The selection of index-tracking collectives will be unconstrained to any particular firm(s).

Baseline Benchmark 10:
100% Morningstar Global All Cap Target Market Exposure

Market Overview:

September was dominated by a significant rise in global government bond yields caused mainly by continued tensions in the Middle East impacting oil supplies. Inflation concerns saw the biggest rise in US Treasury '10yrs' since September 2022, and both the Federal Reserve and The European Central Banks raised interest rates.

These concerns negated the continued positive earnings data for the equity market with the main indices reporting slightly negative returns for the month.

Equity markets were also disrupted by fears over the need for increased regulation in the AI sector, this followed comments from Anthropic which suggested that the technology was accelerating too quickly, even suggesting that without guardrails it could become an "existential threat".

Portfolio performance has been calculated using Morningstar Direct and is believed accurate based on the standard pricing of any underlying investment funds held in the portfolio. In some cases, clients may benefit from additional discounts to those same funds on their chosen custody platform. This will cause differences between actual performance and the performance calculated by Morningstar. We expect in all cases that these differences, where present, will be to investors' advantage.

*Some holdings that may appear unusual represent total return equity swaps (TRS). A TRS is a derivative contract that provides exposure to an underlying equity market or index—such as the Vietnam Stock Exchange—without directly owning the underlying securities. Through the swap, the fund receives the total return (price movements and any dividends) of the reference market in exchange for paying an interest-based cash flow on a notional amount. These instruments are used where direct investment may be less practical or liquid. All such arrangements are conducted with regulated counterparties and are typically supported by collateral to help manage risk.

Important Information:

The portfolio is run on a discretionary management basis by MKC Investment Management Ltd (trading as MKC Invest). MKC Investment Management Ltd is a discretionary investment firm authorised and regulated by the Financial Conduct Authority (FRN: 966731). Registered in England No 13475203. Registered office: Walsingham House, 35 Seething Lane, London, EC3N 4AH. Distribution or sharing of this publication is not permitted without authorisation from MKC Investment Management Limited. MKC Investment Management Limited investment portfolios are only available to retail investors who have been provided with a personal recommendation to invest from their financial adviser. The value of investment may go up and down and you may get back less than you invested. All assets are dominated in UK Sterling. The investment or investment service may not be suitable for all recipients of this publication.
